SUMMARY

Senior full-stack engineer, building production software since 2010, from database and backend design to the frontend products people use every day. Since 2023 I have worked as an independent contract engineer in long-term engagements with several clients in parallel, across healthcare software, hourly staffing, wholesale operations, recruitment data, and nonprofit field operations. I take features from first commit to production, write specs and handoff notes, and use AI-assisted development as part of a disciplined engineering practice.

SKILLS

Backend & data	Ruby on Rails, Laravel / PHP, PostgreSQL, PostGIS, MySQL, Redis, Sidekiq, Solid Queue, Delayed Job, Elasticsearch, REST and GraphQL APIs, OpenAPI
Frontend & mobile	React, Next.js, TypeScript, Vue 3, React Flow / xyflow, Redux Toolkit, React Native, Leaflet
AI & integrations	LLM scoring, speech-to-text (Whisper), text-to-speech (ElevenLabs), Twilio voice and SMS, Stripe payments, webhooks, Salesforce, Bullhorn, HubSpot
Delivery	AWS, Heroku, Vercel, Cloudflare Workers, Docker, RSpec, Pest, Jest, Playwright, CI/CD, code review

EXPERIENCE

Independent Contract Engineer

2023 — present

Long-term engagements, directly and through AlphagenIT.

GravyWork · direct · hourly staffing platform

- Designed and built a separate AI service that runs automated phone interviews to assess workers' skills, reducing manual screening for staff: generated speech questions, recorded answers, speech-to-text, LLM scoring, and signed webhooks back to the main platform.
- Added reliability and fairness controls: model settings in config, late-recording handling, attempt lockouts, call audit logs, and admin health and re-score tools.
- Worked across the Rails API, React admin portal, and React Native worker app: worker earnings, real-time chat, preferred staffing pools, and SMS, email, and push lifecycle messaging.

`Rails · Sidekiq · Twilio · ElevenLabs · Whisper · React · React Native`

XPL · via AlphagenIT · wholesale ordering and inventory

- Built the backend from the first commit through three years of development: a Laravel and PostgreSQL REST API with a service layer and scheduled jobs that automate order cycles and invoice updates.
- Built an inventory ledger with reconciliation checks, price freezing at delivery, Google Sheets integration, and "act as" delegate access with a correct audit trail.
- Added an OpenAPI contract with automated contract tests, and led a new Next.js frontend that uses the API through a server-side proxy.

`Laravel · PHP · PostgreSQL · Redis · Pest · OpenAPI · Next.js`

NeuroFlow · via AlphagenIT · healthcare SaaS workflow builder

- Established the frontend foundation for a no-code visual workflow builder and implemented a substantial part of it: canvas, custom node types, drag-and-drop, and node configuration panels.
- Built branching with first-match and all-match logic and an automatic else path, non-blocking validation on the canvas, and the conversion between the editor graph and the backend workflow format.

`React · TypeScript · React Flow / xyflow · Redux Toolkit · Jest`

Rover · direct · Australian recruitment-data client

- Created and maintained scrapers for major job boards across Australia and New Zealand, feeding a Rails and Sidekiq pipeline with hourly merging by company, Elasticsearch search, and rule-based industry classification.
- Designed and built the job-search API for client companies in Rails, and support their developers who integrate with it.
- Built the frontend and backend of JobRover, an AI job-matching product, including the connection to its matching engine and Stripe billing: subscriptions, invoices, webhooks, refunds, and failed-payment handling.
- Built CRM delivery integrations for Salesforce, Bullhorn, HubSpot, and RecruiterFlow, and an internal operations dashboard in Next.js and AG Grid on Cloudflare Workers.

`Rails · Sidekiq · PostgreSQL · Elasticsearch · Next.js · TypeScript`

Field Reporting Platform · Webb Integrated · reporting and data validation

- Independently built an ad hoc reporting engine: a Vue report builder whose JSON-Schema-checked definitions compile to parameterized, read-only SQL that respects each user's data access, with saved reports, sharing, and CSV/Excel export.
- Built an automated validation system: background checks for spikes, repeats, outliers, and peer differences, with nightly cached statistics, per-country settings, and a review hub.

`Rails · PostgreSQL · Vue 3 · Sidekiq · JSON Schema`

Field Network Platform · Webb Integrated · nonprofit field networks

- Built the server side of offline sync for the mobile app, and most of a shared form library that runs the same forms on web and React Native, with translations, GPS pin-drop, and direct uploads.
- Built background bulk actions with audited cascading changes, a team hierarchy and tagging system, and a reusable table component with saved columns and cascading filters.

`Rails · Vue 3 · PostGIS · Sidekiq · TypeScript · React Native`

Geographic Data Platform · Webb Integrated · field survey mapping

- Built offline map and data packaging for a field survey app, and migrated a PostGIS boundary dataset and its dependent services to a new schema.
- Built Vue and Leaflet map tools, import pipelines from outside survey systems, and webhook integration with a sister app.

`Rails · PostGIS · Vue 3 · TypeScript · Leaflet`

Microblink

`2022 — 2023`

Production applications for receipt processing, purchase validation, and data extraction, using Ruby on Rails and React, after Microblink acquired Sourcepad.

Sourcepad

`2010 — 2022`

Full-stack applications for a range of clients, often in small autonomous teams. Extensive Ruby on Rails and React, Stripe payment integrations for several client projects, and AWS and Heroku deployments.
